

PEG 226 150°C

**RoHS
Compliant**

- Up to 150°C
- Extremely high ripple current
Up to 28A ripple, RMS, Continuous load
- High vibration resistance

APPLICATION

PEG 226 is a new generation of high performance axial electrolytic capacitors, designed for automotive applications with extremely high demands.

BASIC DESIGN

PEG 226 is an electrolytic capacitor with outstanding electrical performance. Polarized, all-welded design, tinned copper wire leads, negative pole connected to the case. The PEG 226 winding is housed in a cylindrical aluminium can with a high purity aluminium lid and a high quality rubber

gasket. Low ESR is a result of a low resistive electrolyte/ paper system and an all-welded design. Thanks to its mechanical robustness the PEG 226 is suitable for use in mobile and in aircraft installations, operation up to 150°C.

SPECIFICATION

Standards

IEC 60384-4 Long Life
Grade 40/125/56

Capacitance range

250 - 4700 µF

Capacitance tolerance

-10 to +30%, -20 to +20%

Rated voltage

25 - 63 VDC

Temperature range

-40 to +150°C

Shelf life at

0V +105°C 5000 h,
+40°C 10 years

Diameter range

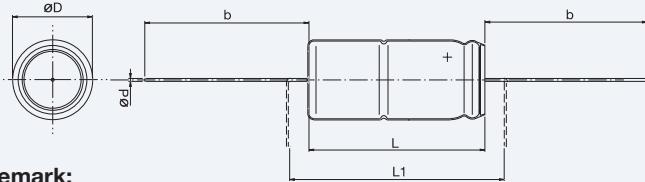

16 - 20 mm

Resistance to vibrations

10 - 2000 Hz, 1.5 mm
displacement amplitude or
max 20 g 3x22 hours

Life test

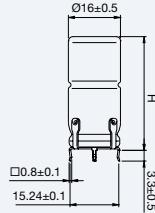

The capacitors must be clamped by the body.
2000 h, 150°C (Ø20 case)
1500 h, 150°C (Ø16 case)

Remark:

Capacitor in standard version
is without insulation. Polyester
insulation on request

Radial version
See page 39

Dimensions table PEG 226 (mm)

D x L	Case code	D ± 0.5	d ± 0.03	L ± 1	L ₁ min	b ± 2 Box	Weight approx (g)

* Capacitor mounted with low thermal resistance path (heat-sink). Maximum ripple current continuous operation (see below).

** Rated ripple current, continuous operation at natural convection ($\varnothing 20$ case 4000 h, $\varnothing 16$ case 3000 h).

*** Max ripple current, at natural convection ($\varnothing 20$ case 2000 h, $\varnothing 16$ case 1500 h)

RIPPLE CURRENT SPECIFICATION AND OPERATIONAL LIFE

The ripple current specification (see table above) is given at case temperature (T_c) and at ambient temperature (T_a). To be able to operate at specified ripple current at temperature T_c , the capacitor needs to be mounted with low thermal resistance path to application chassis.

Frequency correction factor, for ripple current (Corr), see table to the right:

For operational life time calculation, please see pages 148 to 149.

	FREQUENCY					
		100 Hz	300 Hz	1 kHz	5 kHz	100 kHz
Correction factor (Corr) (Typical value)	0.35	0.57	0.80	1.00	1.04	

RELIABILITY

Estimated field failure rate: < 2 ppm/year. The expected failure rate, for this capacitor range, is based on field experience for capacitors with structural similarity. This failure rate is valued during first year of operation. Expected failure rate thereafter: < 1 ppm/y. (Until end of specified operational life)

LEAKAGE CURRENT

Rated leakage current, I_{RL} (μA)
Rated voltage, U_R (V)
Rated capacitance, C_R (μF)
 $I_{RL} = 0.003 \times C_R \times U_R + 4$

ORDERING INFORMATION

For further ordering information please see page 8.
