

Touchless Concentric Rotary Hall-Effect Position Sensor

KEY FEATURES

True touchless operation

Without any internal or external gears or linkages the sensor is easily assembled and calibrated and free from wear and tear over lifetime.

Unlimited mechanical life

The separation of electronics and magnet module allows for a virtually unlimited lifetime independent of number of revolutions.

Made for harsh environments

IP69K sealing, high operating temperature range as well as shock and vibration resistance allow the use in the most demanding environments.

Compact and low profile package

Without the need for a shaft the sensor is provided in a exceptionally compact and low profile package that fits in space contraint applications.

Adaptable to your requirements

Custom mechanical design, programmable transfer function and switch outputs as well as different output protocols and redundancy levels available.

DESCRIPTION

Piher Sensing Systems' PS2P-CON rotary position sensor delivers true touchless sensing for harsh industrial and vehicle environments in a low profile and robust magnetic design.

Magnet and sensor module are placed in separate housings without the need for any gears, bearings or linkages and can be placed anywhere on the pivoting shaft. This allows for easy mounting, thereby delivering additional cost reduction on the production line. Furthermore, without wear and tear of radial forces product reliability and lifetime are increased significantly.

The PS2P-CON measures changes in angular position relative to the sensor by detecting the movement of a diametrically magnetized magnet that is located in a separate housing and is only sensitive to the flux density co-planar with the IC surface.

The PS2P series is complemented by touchless linear (PS2P-LIN) and variable air gap arc (PS2P-ARC) position sensors. All sensors of the series are absolute sensors and will deliver the same level of precision and stability throughout their lifetime as on the first day they are installed - despite extremes of vibration, shock, temperature and contamination.

APPLICATIONS

Off-Highway

- ▶ Bucket position
- ▶ Pedal / throttle position
- ► Hitch position
- ▶ Bus suspension / kneeling position
- ▶ Transmission systems

Automotive

- ▶ Gear selector
- ► Transmission systems

Home & Building Automation

► HVAC damper actuator monitoring

Marine

► Trim / tilt position

Industrial

- ▶ Robotic / hydraulic arm position
- ► Valve monitoring
- ▶ IoT modules
- ► Vacuum circuit breaker monitoring

Touchless Concentric Rotary Hall-Effect Position Sensor

MECHANICAL SPECIFICATIONS					
	With magnet M001	With magnet M006			
Life	Virtually unlimited				
Nominal air gap	3mm, between plastic parts 1mm, between plastic parts

Magnet shown on 0° position. Drawings may not be to scale. Number and function of wires pictured in this datasheet may vary according to output configuration.

Touchless Concentric Rotary Hall-Effect Position Sensor

¹ The analog output is ratiometric, proportional:
- for supply voltage "5V" to input voltage;
- for supply voltage "RE" to 5V.

OUR ADVANTAGE

- ▶ Leading-edge innovative position sensing solutions
 - Contactless (Hall-effect and Inductive Technology)
 - Contacting (Potentiometers, Printed Electronics)
- ▶ Engineering design-in support
- ▶ All our products can be customized to fit target application and customer requirement
- ▶ Capability to move seamlessly from development to true high-volume production
- A global footprint with global engineering and commercial support
- ▶ One-stop shop not limited to position sensors (temperature, pressure, gas,...) through group collaboration
- ▶ Flexibility and entrepreneurship of a medium-sized company with the backing of Amphenol Corporation

Please always use the latest updated datasheets and 3D models published on our website.
